

TELESCOPIC HOT STICKS

CLOSE-UP: Universal Head with Disconnect Stick Adapter

- Telescopic hot sticks offer long reach, speed, convenience and safety tested 100% per ASTM F-711. Fabricated of reinforced high density electrical grade fiber glass laminate for greater strength and dielectric properties. Cushioned cap protects base end.
- Triangle shape enables each section to “lock in automatically” eliminating twisting and turning to lock sections and provides an ergonomic design with a “better gripping” surface for better control.
- Fluorescent tip section is highly visible and has a foam core. All tip sections are 1.15” diameter.
- Larger share shape lock buttons are easy to operate with and without gloves.
- Versatility built in by using only the number of sections required. Tool height (length) can be reduced by depressing the lock button and sliding the bottom sections off. Allowing for a lightweight tool to perform the work easier.
- Easy disassembly by depressing the lock button and sliding a section, or sections, out without the use of additional tools.
- All sections have a smooth glossy surface for routing cleaning and waxing. Only one size lock button and spring for replacement needs.
- Universal head made of strong aluminum alloy incorporates corona discharge design holds universal attachments securely.
 - A complete line of tools and attachments for virtually any application, from pruning to cleaning to sawing, is available.
