

Insulated Torque Tools

Cementex is a name you can trust when in the market for high quality and dependable insulated torque tools that are perfect for any industry. Cementex has a goal which is to provide high quality torque tools that will maintain accuracy as long as possible.

All Cementex Insulated Torque Tools are made of top grade materials, are calibrated according to ASME B107 standards (traceable to NIST) and manufactured according to ISO standards. Meaning that Cementex insulated torque tools are made of high quality and manufactured to the highest standards.

Cementex double-insulated safety tools are designed to provide protection in potentially hazardous electrical work environments. They are the first choice for compliance with safeguarding both qualified workers and equipment.

Specifically, these Cementex insulated torque tools feature two separate layers of insulation for twice the protection. A YELLOW under coat is covered by an ORANGE over coating to create a high-voltage barrier. The impact-resistant, flame-retardant insulation provides protection against flashover, shock, burns and dropped tool shorts. It prevents dangerous accidents and injury that can occur with standard tools. Always use insulated tools as a secondary source of protection, not in place of personal protective equipment. Whenever possible, de-energize lines and equipment before working on or around them.

Every tool should be inspected prior to each use for cracks, cuts or any other apparent damage. The two-color insulation simplifies spotting a coating that is damaged and out of compliance. If the YELLOW under layer becomes visible through the ORANGE outer layer, the tool is no longer safe for hot work use and should be replaced. This extra layer of insulation provides an extra level of protection.

Use Cementex double-insulated safety tools with confidence that technicians will be free from risk to high-voltage exposure on the job.

Warranty:

Cementex offers a two-year warranty covering material and manufacturing defects for the high-voltage insulation that has been applied. The tool has a limited life-time warranty covering material and manufacturing defects.
