

# Proper Sizing for Insulating Rubber Gloves

Measure the circumference of the palm as shown to determine the glove size.

**Measure Around**

If you measure 9" in circumference around your palm, you are simply a size 9.

If you measure and arrive at a measurement that is not a whole number, such as 9-5/8" for example; you do not wish to have a half size, you simply round up to the nearest whole size.

Gloves are available in multiple classes, colors, lengths and sizes—including both full and half sizes (class dependent). Protectors are sized to fit over your rubber insulating gloves, so the same size is used.

Please call us if you have any questions or would like to check stock. You can also email us at [cs@cementexusa.com](mailto:cs@cementexusa.com) with questions, too.
