

Mobile Safety Rescue Hook Stick

The mobile rescue hook kit has been designed for those that have to travel to locations where the long length of a typical hotstick just cannot be taken. This is an invaluable tool for any workplace used to withdraw an injured worker out of a hazardous area, such as confined spaces, in vaults, near switch gear or electrical cabinets and many other industrial areas.

The design features a reinforced handle for proven electrical insulation and a coated heat treated body hook with an 18" opening - this tool is ready when needed.

Each body rescue hook stick is electrically proof tested. Retests are required every two years; must pass a test of 75kV per foot in compliance ASTM F-711 standard specifications.

- Universal Telescoping Hotstick
 - Yellow Tri-Oval Fiberglass tube - enables each section to lock in automatically, no twisting and turning to lock sections.
 - High Visibility - flourescent-colored sections are highly visible.
 - Base cap cushions and protects base end.
 - Easy disassembly - simply depress the lock button and slide section out.
 - Ergonomic design provides better gripping surface for better control.
 - Easy maintenance - all sections have smooth glossy surface for routing cleaning and waxing
- Rescue Hook with Universal Connection
 - 18" Coated Metal Hook
- Heavy Duty Travel Bag (not shown)
 - 1500D Cordura Bag
 - Zippered Closure
 - Reinforced hot stick compartment

Cementex Part Number	Extnded Dimensions* (Diameter x Length)	Retracted Length	Assembled Unit Weight (Lbs.)
CPRH18-208K	18" (hook) x 8'	26"	8.0
CPRH18-312K	18" (hook) x 12'	37"	9.4

**SHIPPING NOTE: Each Stick is shipped in two boxes. Each hook is 5.35 lbs. (Note: up to six of either style can fit in each shipment).*

This two part construction not only allows for ease in travel to different job sites but also provides immediate and dramatic reduction of logistical freight costs (as they are not required to ship LTL based on dimensional weight).
